SUMMARY

High-impact .NET Developer with 4+ years of experience engineering scalable, API-driven architectures using .NET 8/Core, Blazor, and Azure. Expert in building secure, production-ready software by applying **Microservices**, **Clean Architecture**, and **Asynchronous** programming. Proven track record of reducing system latency by 25% and enhancing data security through **RBAC** and **Identity Management**. Currently specializing in **Cybersecurity** and **Linux** to bridge the gap between application development and secure infrastructure.

SKILLS SUMMARY

- **Backend Development:** C#, .NET 8/7/Core, ASP.NET Core Web API, Microservices, Entity Framework Core (EF Core), LINQ, RESTful & SOAP Services.
- **Frontend Development:** Blazor, Razor Pages, Angular, TypeScript, JavaScript (ES6+), HTML5/CSS3, Responsive Design.
- **Security & Identity:** OAuth2, OpenID Connect (OIDC), JWT, Azure Key Vault, Role-Based Access Control (RBAC).
- **Databases:** MSSQL (SQL Server), Oracle (PL/SQL), Database Optimization & Indexing.
- **Cloud & DevOps :** Microsoft Azure (App Services, Functions), CI/CD Pipelines (Azure DevOps), Docker, Linux (Ubuntu/RHEL).
- **Testing & Tools:** xUnit, NUnit, Postman, Swagger, Power BI, Git, Jira, Agile/Scrum

EXPERIENCE

HANSAE MOBILITY USA Manufacturing LLC

May 2025 - Present

Full Stack .Net Developer

Pontiac, MI

- Engineered and deployed high-performance **MES** modules using **Blazor** Server and **C#**, migrating legacy C# workflows to modern web-based interfaces to increase operational efficiency by 15%.
- Developed and maintained **Razor** Pages integrated with **JavaScript** (ES6+) for real-time manufacturing dashboards, ensuring secure data flow between **MES** (Manufacturing Execution System) and **SQL Server** backends.
- Debugged and optimized mission-critical **.NET** applications, reducing production line downtime by 12% through proactive performance tuning and asynchronous programming best practices.
- Designed automated inventory tracking tools using **JavaScript** and **SQL**, facilitating real-time shipping updates and improving data entry accuracy for production teams.
- Developed and enhanced **ERP** modules using **VB.NET** to support manufacturing workflows and improve operational efficiency. Created new forms and functionalities in **ERP** to streamline data entry, reporting, and process automation for production teams.
- Authored comprehensive technical documentation and conducted training sessions for end-users on new ERP functionalities, reducing support tickets by 20% during post-deployment phases.
- Collaborated in an **Agile/Scrum** environment to manage **CI/CD** deployments via **TFS**, implementing secure code reviews and automated testing to ensure 99.9% application uptime.

COUNTY OF LOS ANGELES

Dec 2023 - May 2025

Full Stack .Net Developer

Los Angeles, CA

- .NET Development and enhanced large-scale **.NET Core**, **ASP.NET MVC** applications using **C#**, **Entity Framework**, and **Oracle**, delivering secure, maintainable, and highly available solutions used across multiple state portals.
- Developed and maintained **ASP.NET Core** applications for Family & Children Services, ensuring data integrity.
- Built dynamic user interfaces using **Blazor**, **Razor**, **JavaScript**, and **HTML5** to enhance **UX**.
- Designed and developed interactive **Power BI** reports using table, matrix, and chart visuals to provide deep insights into child welfare and medical hub data.
- Designed and implemented **RESTful** and **SOAP-based web services** to exchange child data securely with hospitals and LA County. Developed and deployed automated email schedulers for appointment reminders, case updates, and report distributions using **.NET** and **SMTP** services.
- Implemented data binding, dependency injection, and event handling in **Blazor** for seamless UI updates.
- Integrated **Oracle** Data Manager with **ASP.NET Core** and **Blazor** applications, enabling seamless real-time data retrieval and updates. Integrated **Oracle** database for efficient data management and real-time updates.
- Strengthened application architecture by implementing clean separation of concerns through **MVC** patterns, service contracts, dependency injection, and API versioning, improving long-term maintainability and reducing regression risks by ~20% across distributed modules.
- Implemented Azure-based authentication and access control for secure health data. Automated CI/CD pipelines using Azure & TFS for seamless deployment
- Collaborated closely with QA, product owners, and cross-functional teams in an Agile/Scrum environment supporting **CI/CD** deployments via **TFS** and **Azure DevOps**, coordinating sprints, and managing deadlines to ensure smooth development cycles and reliable releases.

Think & Learn Pvt Ltd

Jun 2021 - Jul 2022

Software Developer

Hyderabad, IND

- Designed and developed enterprise-grade web applications using **ASP.NET MVC**, **C#**, and **Entity Framework**, delivering scalable and high-performance modules for multiple business workflows.
- Developed responsive UI components in **Angular**, improving cross-browser usability and increasing user engagement by 30%.
- Reduced API response latency by 25% through advanced **SQL** query tuning, schema optimization, and **LINQ** best practices

EDUCATION

University of Central Missouri, Missouri, USA

Aug 2022 - Dec 2023

Masters, Computer Science

Hindustan University, TN, IND

Aug 2017 - Jul 2021

Bachelor's, Electronic and Communications Engineering
